

DSG Announces Medical Device Company to use its eCaseLink™ EDC to Expedite Clinical Trial

Oaks, Pa., May 14, 2003-Document Solutions Group, Inc. (DSG), a provider of clinical trial data collection software and services, today announced that Ethicon Endo-Surgery, Inc. (EES), a medical device company headquartered in Cincinnati, Ohio, has selected its eCaseLink™ electronic data capture (EDC) software to expedite the data collection for an investigational study.

DSG's eCaseLink enables companies to collect, clean and analyze clinical data more efficiently. DSG designs the EDC screens and creates the study database along with providing study set-up, training, user manuals, help desk and data hosting services.

"We are pleased to add Ethicon Endo-Surgery to our growing EDC client list," said Tony Varano, DSG president and CEO. "The marketplace has been embracing our approach to EDC as it provides a solution that is comfortable for sites to use and robust for data management and sponsor personnel. It's an ideal combination giving sites and sponsors what they are looking for in an EDC system."

ECASELINK is thin-client EDC, but it operates with the speed and efficiency of a thick-client solution. Through DSG's unique technology, rules for edit checks reside on a PDF form that looks identical to paper CRFs; error messages, even cross-panel validation checks, execute before data are submitted to a central server.

About Document Solutions Group, Inc.

DSG, Inc., headquartered in Oaks, PA, delivers innovative clinical data capture software products and related services, including electronic data capture software, electronic patient diaries and digital on-demand printing software, to its life sciences clients. CaseLink®, DSG's flagship product, is the industry's leading digital on-demand printing software that allows clients to create, update and print individualized case report form books for clinical trials. eCaseLink™ combines this CRF design and delivery expertise with Web-based technology, providing the only EDC solution that delivers electronic data entry screens that are identical to paper CRFs. All of DSG's products can be deployed independently or as a suite, allowing clients to support accurate and efficient data capture at any investigator site regardless of the technological infrastructure.
