PEGUS Selects DSG's eCaseLink EDC Solution for Upcoming Actual Use Study

OAKS, PA (June 22, 2005) – PEGUS Research, Inc. one of the fastest growing pharmacoepidemiologic research centers has selected DSG, Inc., a leading eClinical data management software provider to the life sciences industry, to provide electronic data capture (EDC) services for an upcoming Population Trial (Actual Use).

PEGUS PST provides unique advantages in conducting actual use studies. The company has conducted usage and safety studies for some of world's top pharmaceutical and consumer products corporations. Their robust network of pharmacy and clinical research centers allows them to conduct trials with up to 100,000 patients though most studies average between 500 and 3,000 subjects.

"Our clients depend on us to provide timely and accurate use and safety information for large populations of subjects in real-world situations," said David McCammon, President of PEGUS Research. "We needed an EDC vendor that understood and was able to commit to our time frame and scalability needs. DSG was the only vendor that had the track record of consistent client success and the ability to scale their solutions to the needs of our trials. "

Combined with eCaseLink EDC, PEGUS will have a more powerful approach to conducting this upcoming actual use study and for future studies. In addition to their network of pharmacy and clinical research centers, eCaseLink's robust medical encoding and adverse event reporting tools will provide a streamlined reporting tool to PEGUS's network of clients. eCaseLink's easy-to-use interface and nominal set up times will make a smooth transition from paper to EDC for PEGUS, while decreasing data management times by up to 40%.

"With rising R&D costs and stringent safety guidelines the need for more effective safety reporting is paramount in the clinical trial process," said Tony Varano, President and CEO of DSG, Inc. "Companies with innovative approaches to research such as PEGUS are leading the way in this initiative. We are proud to provide them with an EDC solution that will move their data management processes forward, quickly, easily, and cost effectively."

About DSG, Inc.

Since 1992, DSG, Inc. has been supporting clinical trial data collection with innovative technology solutions including EDC, ePRO and digital on-demand CRF publishing software to over 300 companies in the life science industry. DSG's products allow friendly, accurate and efficient data capture at any investigator site regardless of the site's technological infrastructure. eCaseLink™, DSG's pioneering EDC technology, allows site users immediate server edits, without the traditional need to first save or submit, is fully integrated with eDiaryLink™ ePRO, and offers the highest site acceptance, fastest submission speed, and nominal set up time. DSG has successfully supported over 250 clinical trials, at over 14,000 sites, with over 200,000 patients world-wide. For more information, please visit www.dsg-us.com.
